## ZipTel Files New Patent for Zifi Technology

- New patent has been filed by ZipTel Limited in relation to the Zifi telecommunication system.
- The Zifi development program is complete; no further capital investment required.
- Discussions to date with potential industry partners demonstrate the real world applications for the technology.
- Further details of the multi-billion dollar addressable markets and disruptive nature of the Zifi products to be provided tomorrow – 16 November 2016.

ZipTel Limited ("**ZipTel**" or "the **Company**", ASX: ZIP) is pleased to announce that it has filed a patent in Australia for the new enterprise product offerings relating to the Zifi telecommunication system. The protection offered by the patent will be extended by filing further applications under the Patent Cooperation Treaty (PCT). Circa 145 countries are signatories to the PCT.

The Zifi technology delivers an enhanced, fault-tolerant, integrated closed-network communications platform to a wirelessly networked site such that mobile devices (phones, laptops and portable computers) are able to provide users with the ability to make voice calls, group / conference calls, send text and rich messages (both 1-1 and group) between devices registered to the network and connected to the server-side virtual infrastructure that manages the interconnectivity without the need to connect to public telephony or traditional two-way radio infrastructure.

Keaton Wallace, Executive Director, ZipTel commented:

*"This patent is an important milestone in building our pipeline of Enterprise opportunities in a manner which protects our intellectual property. With this process completed, the Company is in a position to execute agreements with exciting industry partners, in the very near term."*

**-Ends-**
